Crude Oil Peak

Sydney in next 20 years:

Natural population growth only 200 K.
Government target 1.5 million immigration
incl. descendants (88% of total growth)

More details in this post: Sydney would peak at 4.9 million with zero net overseas migration <http://crudeoilpeak.info/sydney-would-peak-at-4-9-million-with-zero-net-overseas-migration>

Reason for immigration The root cause is that both State and Federal governments have run out of ideas how to grow the economy sustainably (i.e. accepting environmental limits and resource depletion) and how to finance the external account deficit except by an ambitious immigration program involving opportunistic, speculative overseas investors.

Impact of immigration Unaffordable housing, growing property bubble financed by debt.

Destruction of our suburbs: flats everywhere, trees chopped down, absentee landlords, vacant dwellings, abandoned unregistered cars, more traffic jams, overcrowded schools and hospitals, language problems, subcultures threatening multiculturalism.

<<< Electric flats at Carlingford through 132 KV transmission line.

A new community vibrating @ 50 Hz. Government is desperate to find land.

There will not be enough natural gas and electric power for an additional 1.5 m population. The more people, the longer the petrol lines in the next oil crisis predicted by the International Energy Agency around 2020 (because low oil prices mean that not enough investments are made by the oil industry to offset decline in existing oil fields)

<https://www.iea.org/newsroom/news/2017/march/global-oil-supply-to-lag-demand-after-2020-unless-new-investments-are-approved-so.html>

Oil crunch will trigger another financial crisis like in 2008/09 with a credit freeze and the final bursting of the asset bubble if this has not happened before.

The government plan is just at the beginning, it will get much worse. Write letters to your State and Federal MPs what you think.
